

# SUTURING TECHNIQUES FOR GUIDED BONE REGENERATION

SEPTEMBER 19, 2020

## COURSE DESCRIPTION

The goal of this course is to reduce your complications in Guided Bone Regeneration by improving your suturing technique. Without a tension free wound closure, GBR simply does not work! How many times after performing GBR have your patients called, informing you that the sutures were coming off? Have you had to re-do your bone grafting because of dehiscence? Did you blame your patient? You are not alone!

### Goals of the lecture:

- Clear the dilemmas about wound closure
- Clarify the types of sutures used for oral cavity
- Overview of different types of suture ties used in oral cavity
- Learn about tissue handling

Dr. Jamali's particular attention to soft tissue, has helped him create a successful practice focusing on jaw and face reconstruction.

The A.M. lecture will explain: Proper handling of the soft tissue, Different types of sutures, Types of needles, Explanation and reasoning behind different suture ties

### Also included:

- Continuing Education Credits: 6 CE Credits
- Lunch

## SPEAKER

Majid Jamali, D.M.D.

Oral & Maxillofacial Surgeon
